Dear Bausen Customer

What is Q-Mark product certification?

Product certification is an independent third party confirmation that products, systems and/or installers meet, and continue to meet, appropriate standards.

The BM TRADA Q-Mark proves that the certified product will exceed the minimum requirements set by the relevant product standard or technical specification.

Backed by the history of TRADA (Timber Research and Development Association), along with our knowledge and reputation, a BM TRADA Q-Mark is the ultimate endorsement for any construction product.

All Q-Mark schemes prove that products are:

- properly tested and appraised in the first instance
- manufactured under an appropriate quality management system
- consistently manufactured to the same high standard, day after day.

Q-Mark enables manufacturers to prove the quality of their products and helps specifiers and end-users to buy with confidence.

The Q-Mark is readily identifiable as a market leader in the certification of timber related products as well as a growing range of other construction materials.

Only once a company has had its products approved under the scope of a Q-Mark scheme, are they permitted to use the Q-Mark logo (shown below) on literature and products.

Q-Mark schemes have been developed for the following product ranges:

- Engineered wood products
- Wood flooring
- Building systems
- Enhanced security doorsets and windows
- Fire doors - manufacturing and installation
- High performance timber and timber composite windows
- Timber balustrades
- Timber engineering hardware
- Trussed rafters
