The warm beauty of wood has inspired humanity since the beginning of time. From the elegance of traditional Scandinavian full-scribed log homes, to Europe’s post-modern constructions, to the weathered charm of the seaside homes of the Eastern Coast—wood defines and shapes their unique character. The grain and knots in wood, like the lines in our own faces, express its inherent character and personality.

WHY HIDE THE PERSONALITY OF YOUR WOOD?

Sansin Enviro Stains let the personality of your wood shine through. Where many traditional stains and coatings put a layer between you and your wood, Sansin penetrates deeply, bonding directly with individual wood cells for maximum protection. If you plan on using a naturally beautiful material like wood, why would you cover it up?

INTERIORS

© The Sansin Corporation | PRINTED IN CANADA
We’ve harnessed the power of nano technology to create color like you’ve never seen before. An innovative process atomizes the highest quality pigments into tiny particles so incredibly fine – less than a billionth of a meter – that they combine with the protective oils and resins in Sansin Enviro Stains on a molecular level. Once applied to your home or deck, they penetrate deeply, pulling the pigmentation down into the wood for uniform color that is so vibrant and long-lasting it has to be seen to be believed.

INSPIRED BY NATURE

With over 80 choices – including our interior color line-up below – you can be sure of finding the color to suit your every project. For inspiration, our designers simply turned to the everyday miracles of the natural world. And should you have a color in mind that isn’t available in our collection, our custom mixing program lets you bring it to life.

THE RIGHT CHOICE FOR YOUR WOOD
